Data analytics made accessible 2020 edition pdf download.

Kaggle launched in 2010 with a number of machine learning competitions, which subsequently solved problems for the likes of NASA and Ford. Not strictly necessary, but definitely nice to have!8. If Earth-based data isn't your thing, NASA's Planetary Data System takes things a step further with data from interplanetary missions, such as the Cassini probe (which orbited Saturn from 2004 to 2017). While even the names of these datasets are pretty complex, each entry has a helpful breakdown of what's included, as well as related datasets, and how to go about analyzing them. While it's not the best tool if you prefer to browse, if you have a particular topic or keyword in mind, it won't disappoint. From the quirky to the unashamedly geeky, there's no better evidence of data's ubiquity in our lives. And, if you'd like to learn more about what it takes to forge a career in data, check out the following: Enter the UCI Machine Learning Repository. The best part though is their annual statistical yearbook. First off: the British Film Institute industry statistics. This makes it easy to find something that's suitable, whatever machine learning project you're working on.5. Earth DataType of data: Earth science Data compiled by: NASA Access: Free, no registration required Sample dataset: Environmental conditions during fall moose hunting season in Alaska, 2000-2016If you think space is awesome (let's face it, space is awesome!) look no further than Earth Data. CERN Open Data PortalType of data: Particle Physics Data compiled by: CERN Access: Free, no registration required Sample dataset: Higgs candidate collision events from 2011 and 2012Want to demonstrate your ability to work with highly complex datasets? In many cases, they even provide sample code to get you started (thanks, CERN!).7. If you're interested in more general data about the US population, you can also check out the US Census Bureau, offering a rich selection of data about US citizens, their geography, education, and population growth.Type of data: Mostly business and finance Data compiled by: Datahub Access: Mostly free, no registration required Sample dataset: Average mass of glaciers since 1945The goal of many data analysts is to help drive savvy business decisions. All very intuitive and quite a helpful guide if you're new to data analytics.10. But if you're seeking something more niche, why not specialize? It offers access to over two petabytes of information, including datasets from the Large Hadron Collider particle accelerator. While Datahub covers a variety of topics from climate change to entertainment, it mainly focuses on areas like stock market data, property prices, inflation, and logistics. It's an excellent place to start.2. KaggleType of data: Miscellaneous Data compiled by: Kaggle Access: Free, but registration required Sample dataset: Daily temperature of major citiesLike Google Dataset Search, Kaggle offers aggregated datasets, but it's a community hub rather than a search engine. If you're looking to break into the healthcare industry (a key focus for many data scientists, especially in the area of machine learning), these datasets are a good option for your portfolio. If you want to feature your analysis as a project in your portfolio, there are certain steps you'll need to follow—you can learn how to build your data analytics portfolio in this guide.If you're completely new to data analytics, why not try out a free, five-day introductory short course? So what do you do once you've found your dataset and analyzed it? Find datasets covering pick-up/drop-off times and locations, trip distances, fares, rate and payment types, passenger counts, and more. Search results are also clearly labeled at federal, state, county, and city levels. The site also provides some additional tools, including user guides, taxicab zone maps, data dictionaries (for explaining the spreadsheet labels), and annual industry reports. You'll get a hands-on introduction to the field, complete with access to a workable dataset. Because many of the data on the portal are updated monthly (or even daily) you'll always have something fresh to work with, as well as data that covers broad timescales.5. UCI Machine Learning RepositoryType of data: Machine learning Data compiled by: University of California Irvine Access: Free, no registration required Sample dataset: Behavior of urban traffic in Sao Paulo, BrazilGeneralized repositories are great if you're happy to browse. With over 200,000 datasets covering everything from climate change to crime, you can lose yourself in the database for hours. Wondering where to find free and open datasets for your next data project? Look no further...If you're looking for a job in data analytics, you'll need a portfolio to demonstrate your expertise. It provides a broad collection of crime statistics from a variety of state organizations (universities and local law enforcement) and government (on a local, regional, and state-level). Publicly available since 1994, this repository provides access to all of NASA's satellite observation data for our little blue planet. Frankly, these data aren't for the faint of heart but if you're interested in particle physics, they're worth checking out. Launched thirty years ago by the University of California Irvine, don't let the 90s vibe mislead you—the UCI repository has a strong reputation among students, teachers, and researchers as the go-to place for machine learning data. This breaks down the year's data with some excellent statistical analysis and visual reports—great if you're new to data analytics and want to check your work against the real thing.9. NYC Taxi Trip DataType of data: Transport Data compiled by: New York City Taxi and Limousine Commission Access: Free, no registration required Sample dataset: Take your pick!This is a weirdly fascinating one...since 2009, the NYC Taxi and Limousine Commission has been accruing transport data from across New York City. Of course, if you're new to data analytics, you probably don't have much expertise! Not to worry. Global Health Observatory Data RepositoryType of data: Health Data compiled by: UN World Health Organization Access: Free, no registration required Sample dataset: Polio immunization coverage estimates by regionThe Global Health Observation data repository is the UN WHO's gateway to health-related statistics from across the globe. Each dataset also has some pretty nice visual breakdowns and analysis, so you can see if it has the features you're looking for before downloading it.Next stepsIf you're anything like us, you'll lose hours simply browsing these vast repositories. Who knows, you might even make a scientific discovery...6. Google Dataset SearchType of data: Miscellaneous Data compiled by: Google Access: Free to search, but does include some fee-based search results Sample dataset: Global price of coffee, 1990-presentIt seems we turn to Google for everything these days, and data is no exception. As such, using economic or business datasets for your portfolio project might be worth considering. Google Dataset Search aggregates data from external sources, providing a clear summary of what's available, a description of the data, who it's provided by, and when it was last updated. Covering everything from malaria to HIV/AIDS, antimicrobial resistance, and vaccination rates, the portal even has a nice little feature that lets you preview data tables before downloading them. BFI film industry statisticsType of data: Entertainment and film Data compiled by: British Film Institute Access: Free, no registration required Sample dataset: Weekend box office figures from 2001-presentIf you're looking for some data that are a bit more digestible, the next few should be right up your street. Launched in 2018, Google Dataset Search is like Google's standard search engine, but strictly for data. Pull data on hate crimes, officer assaults, homicides, and more. It has since evolved into a renowned open data platform, offering cloud-based collaboration for data scientists, as well as educational tools for teaching artificial intelligence and data analysis techniques...plus, of course, tonnes of great datasets covering almost any topic you can imagine.3. Data GovType of data: Government Data compiled by: US Federal Government Access: Free, no registration required Sample dataset: Lobster Report for Transshipment and SalesIn 2015, the US Government made all its data publicly available. The fact you might not have worked on a paid project yet doesn't mean you can't whip up a compelling portfolio using some practice datasets.Fortunately, the Internet is awash with these, most of which are completely free to download (thanks to the open data initiative). As you can imagine, there's plenty to peruse, from weather and climate measurements to atmospheric observations, ocean temperatures, vegetation mapping, and more. FBI Crime Data ExplorerType of data: Crime and drugs Data compiled by: Federal Bureau of Investigation Access: Free, no registration required Sample dataset: Homicide offense counts in Point Pleasant, 2008-2018If you're fascinated by crime, the FBI Crime Data Explorer is the one for you. In this post, we'll highlight a few first-rate repositories where you can find data on everything from business to finance, planetary science and crime.Prepare to geek out, and here we go:1. Datasets are clearly categorized by task (i.e. classification, regression, or clustering), attribute (i.e. categorical, numerical), data type, and area of expertise. Throughout the year, the BFI accrues and releases data on everything from UK box office figures, to audience demographics, home entertainment, movie production costs, and more. Head to the CERN Open Data Portal. Like the last couple of entries on our list, it also includes some helpful user guides to support data navigation. For a government website, it has some surprisingly user-friendly search functions, including the ability to drill down by geographical area, organization type, and file format. It's pretty interesting to compare the differences in figures from 2009 to the present day, especially within such a small geographic area.
